

Jade Duan

Burnaby, BC | jade.duan.earth@gmail.com | github.com/eerieA | linkedin.com/in/jade-duan/

Technical Skills

TypeScript, JavaScript, Python, React.JS, Angular, PyQt, Jasmine, Puppeteer
Algorithms, Data visualization, Agile, OOP, DSA

Experiences

Programmer Analyst II @ UBC IT, *May 2025 - now*

- Developing a software platform to help orchestrate a dense, multi-layered network across 3 campuses, 2 hospitals, and 100+ facilities.
- Participate in technology researches, plausibility investigations, and development ceremonies.

Software Developer Intern @ UBC IT, *Sep 2023 - Sep 2024*

- Developed a software tool to validate network device configurations for a dense, multi-layered network.
- Maintained RESTful API tests for an in-house network tool, reducing recurring issues by 25%.
- Refactored APIs to enhance modularity, decreasing feature expansion time by 15%.
- Optimized Python-based inventory tool architecture, increasing code readability by 33%.

Technical UI Designer @ Beamdog Games, etc., *Apr 2020 - Aug 2022*

- Contributed to the CI/CD workflows, improving UI reliability and timely delivery across sub-systems.
- Coordinated requirements from different departments, reduced 12% operational frictions.

Lead Designer, Civil Engineer @ I&S Studio, Huayu Engineering, etc., *Pre-Feb 2020*

- Integrated key business needs into consumer engagements, increasing sales by 52%.

Selected Projects

Lightweight Markdown Workspace (*Personal*), *Apr 2026 - Jun 2026*

- Built a local-first Markdown workspace using React, TypeScript, and Tauri, featuring a split-pane editor with live preview rendering and persistent offline storage across browser and filesystem backends
- Real-time wikilink system, supporting cross-note navigation and fast search across 500+ documents
- Optimized rendering and interaction performance with incremental Markdown/Mermaid updates and debounced state persistence, achieving sub-300 ms save latency and fully offline, backend-free operation

Network Configuration Checker (*Professional*), *Jan 2024 - Mar 2024*

- Designed the core algorithm and selected optimal data structures, improving validation speed by ~30%.
- Built Python-based solutions following clean development principles, reducing complexity by 25%.
- Authored 50+ unit tests to ensure functionality and future scalability.

Git Peek (*Personal*), *Dec 2024 - Jan 2025*

- Optimized API calls, reducing redundancy by over 40%, minimizing rate limit issues.
- Deployed on Azure and Render.com, achieving 99.9% uptime.

Coding Quizzes (*Academic*), *May 2024 - Jul 2024*

- Integrated an LLM API using Node.js to generate and evaluate quiz content dynamically.
- Designed data mapping logic to render real-time results into UI using JavaScript, MySQL, and CSS.

Education

B.Sc., Computer Science, University of British Columbia, BC, CA

M.Eng., Structural Engineering & B.Eng., Civil Engineering, various universities, CN
